

# IPC System 8

(ScotchKote™ Fusion Bonded Epoxy Coating 134)

## INTRODUCTION OF IPC SYSTEM 8

The cost of the coating is only a small fraction of the cost of parts and components, yet the coating is the major means of assuring extended operation by preventing deterioration and service disruption due to corrosion loss. **IPC System 8 Fusion Bonded Epoxy Coatings** represents a cost-effective solution as an internal coating technology for the oil, gas, and water industries.

**IPC System 8** is suited for coating parts where heavy build-up is required. With a longer gel time, **IPC System 8** allows for the coating of larger surface areas and parts with complex recesses, without runs, sags, or delamination.

**IPC System 8** is resistant to wastewater, corrosive soils, hydrocarbons, harsh chemicals, and sea water.

## TYPICAL APPLICATIONS

➔ Pipe spools, valves, springs, and vessels.

## SPECIFIC ADVANTAGES

- ➔ Fast curing for high application productivity.
- ➔ Protects over a wide temperature range.
- ➔ Resistant to soil stress and back fill compaction.
- ➔ Resistance to cathodic disbondment.
- ➔ Long-term performance history in water, sewage, and other service environments.
- ➔ Useful for coating the internal of pipe when a smooth, corrosion-resistant coating is required.
- ➔ Suitable for moderate temperature service in the presence of H<sub>2</sub>S, CO<sub>2</sub>, Crude Oil, and Brine.

## PHYSICAL PROPERTIES

- ➔ Thickness: 10 mils - 30 mils (0.010" - 0.030")
- ➔ Adhesive Strength: 4,300 psi (ASTM D 1002)
- ➔ Comp. Strength: 12,800 psi (ASTM D 695)
- ➔ Tensile Strength: 7,300 psi (ASTM D 2370)
- ➔ Thermal Shock: 10 cycles (no effect @ -100°F to 310°F)
- ➔ Coefficient of Friction: 0.25 (static)
- ➔ Electric Strength: 1,000 V/m (ASTM D 149)
- ➔ Elongation: 4.2% (ASTM D 2370)
- ➔ Service Temperature: 65°C / 150°F

## CHEMICAL / PRESSURE / TEMPERATURE RESISTANCE TESTS

Test Conditions	Gas Phase	Result	Test Conditions	Gas Phase	Result
Autoclave, 120°F 48 hrs. @ 1,500 psi	99.5% CO <sub>2</sub> 0.5% H <sub>2</sub> S	Pass	Autoclave, 200°F 48 hrs. @ 3,300 psi	86% CH <sub>4</sub> 8% CO <sub>2</sub> 6% H <sub>2</sub> S	Pass
Autoclave, 150°F 48 hrs. @ 2,200 psi	80% CH <sub>4</sub> 12% CO <sub>2</sub> 6% H <sub>2</sub> S	Pass	Autoclave, 300°F 48 hrs. @ 3,000 psi	90% CH <sub>4</sub> 10% CO <sub>2</sub> Trace H <sub>2</sub> S	Pass

Note: Pass indicates excellent adhesion with no coating loss or blistering in aqueous, hydrocarbon, or gas phase.
